

EAYMON LATIF

AI Engineer & Consultant

UK · Remote-first | 07394 744675 | main@eaymon.com | eaymon.com | linkedin.com/in/eaymon

SUMMARY

AI engineer building production agent systems and the multi-tenant SaaS products around them. Twenty years shipping technical products — CTO of a \$32M company before thirty (Inc 5000 #5 fastest-growing private company in America, 2016) — now working at the modern LLM tooling layer on the Anthropic stack. 50+ shipped products across 9 Fortune 500 and 3 Fortune 50 clients. I design the failure modes before the happy path and ship measurable production wins.

Available for senior contract engagements, founding-engineer roles, fractional CTO / AI-lead work, or SaaS & AI implementation recovery via WeSync.

CORE SKILLS

AI / LLM: Anthropic Claude, MCP (Model Context Protocol), agent orchestration, tool / function calling, RAG, prompt engineering, eval-driven development, Claude Code, OpenAI API, DeepSeek

Engineering: Software architecture, multi-tenant SaaS, distributed systems, API design, production reliability and incident response

Languages: Go, PHP, JavaScript / TypeScript, Python, Node.js

Data & infrastructure: MySQL, PostgreSQL, AWS, Cloudflare, Proxmox, Vultr, Railway, Docker, Linux, GitHub Actions

Leadership: Engineering leadership, fractional CTO, solutions architecture, technical due diligence, onshore / offshore team management

EXPERIENCE

Founder & Lead Engineer — FXVPS

2017 – Present

Trading-infrastructure SaaS across two brands, 12,000+ registered accounts since 2017; solo founder across product, multi-region infrastructure, AI tooling, billing, and incident response.

- Multi-channel Trade Journal alert engine (Telegram, ntfy, browser SSE, HMAC-signed webhooks); the same release hardened tenant isolation after a filtering regression was caught in review.
- Multi-platform trade reconciliation (MT4 / MT5) recovered \$540k of phantom data across 7 accounts, surfaced \$4k of accounting drift, and re-anchored P&L to the broker as source of truth.
- LLM content-audit pipeline reviewed 126 customer emails, surfaced 4 contractual contradictions, and shipped corrections to 38 customers with zero failures — now a monthly automated audit.
- Cost-routed model selection across production AI surfaces (DeepSeek for volume, Claude for synthesis / code), holding customer-facing AI spend under \$50/month at full fleet enrolment.
- Self-healing provisioning pipeline (golden templates, fail-closed account creation with a logon self-test) retired a recurring class of duplicate-allocation and silent-password-failure bugs.
- Billing-lifecycle automation reconciling against the host daily, with tuned dunning so live trading accounts are never suspended prematurely.
- Headless MetaTrader compile-and-publish pipeline for customer indicators, plus a brand-neutral Trade Journal hook that replaced per-portal patches with one shared module.

Stack: Go, PHP, MT4 / MT5, WHMCS, Vultr, Proxmox, Cloudflare, Railway, Anthropic Claude, DeepSeek, MCP

Co-Founder & CTO — WeSync

2021 – Present

Independent SaaS and AI implementation-recovery practice — Big-4 finance rigour paired with Fortune-500 technical architecture, independent of the original vendor.

- Built the 21-day Implementation Recovery Audit: a fixed-scope technical and process autopsy of a failed deployment, delivered as a report.
- Productised a remediation engagement model for independent execution of the recovery plan, plus an ongoing fractional CFO + tech-architect retainer.
- Vendor-independent with no kickbacks; offering covers enterprise SaaS and AI / data implementation recovery.

- Co-founded with a former Deloitte consultant carrying \$150–340M programme experience.

Engineering Lead (Contract) — Farm to You

2024 – Present

Producer-direct marketplace SaaS; feature-architecture leadership across web, API, and delivery with a nine-person remote team. Engaged on contract via UK Ltd.

- Shipped the v4 seller & delivery chain behind progressive feature flags — the live marketplace kept trading through the migration.
- Built the Market Partner Program (multi-tenant schema, producer prefill, full-funnel attribution), piloting across three markets.
- Launched Farm Direct Sourcing — a two-sided B2B wholesale lane beside the consumer storefront.
- Rebuilt SEO foundations (sitemap, structured data, canonical normalisation, page-speed); migrated 985 issues from Jira to Plane and ran UAT for major releases.

Stack: PHP, JavaScript, MySQL, feature flags, Playwright, Plane

Chief Technology Officer — Company.com

2013 – 2015

Bundled operational cloud software for SMBs (partners: OfficeMax, Radio Shack) — a \$32M turnaround.

- Restructured the back-office team and rebuilt six years of work in a nine-month timeframe; underpinned documented revenue growth of 23,000% over three years.
- Cut staffing cost \$1.8M → \$650k; reduced hardware cost 10x; migrated J2EE / PostgreSQL to PHP (Yii) / MySQL; rebuilt 10 products; led a hybrid team of 13.
- Result: #1 fastest-growing company in Georgia and #5 on the Inc. 5000 (2016) — fifth-fastest-growing private company in America.

EARLIER EXPERIENCE

Interim CTO — aXessPoint

2021 – 2022

Interim technical leadership across three property-management SaaS platforms; current-state assessment, gap analysis, and a delivery roadmap run on JIRA / Agile.

Director of IT & Co-Founder — Juvo360

2015 – 2018

Co-founded an hourly-work marketplace; architected the web and mobile platforms, designed the cloud infrastructure, and owned 12-month engineering and product roadmaps.

Principal Solutions Architect — FortyFour

2013 – 2015

Cross-platform solution design for enterprise brand and ecommerce clients, including the Coca-Cola “Share a Coke” campaign and Bluegrass Cellular (concurrent with Company.com).

Managing Partner — Think Digital

2011 – 2013

Mobile and web consulting across estimation, hiring, and delivery; clients including Home Depot, City of Miami, and Alternative Apparel.

Mobile Strategist & Architect — The Home Depot

2009 – 2011

Authored a 12-month mobile strategy designed to grow revenue ~10x (\$1.5M → \$15M); delivered the flagship app for \$1.25M in 5 months against competitors at \$7M over 18 months.

Senior Mobile Architect — Smartsoft

2009 – 2010

Mobility subject-matter expertise for Fortune 500 clients; cross-platform framework across four platforms; AT&T CTIA Wireless 2010 nomination.

Senior Programmer / Analyst — Accenture

2006 – 2008

Adjudication-rules automation for a major Canadian bank; new-feature delivery on a US telecom billing system covering 70 voice and data products.

EDUCATION

BSc (Hons) Computer Science with Network Communications — Kingston University, 2002 – 2006

SELECTED RECOGNITION

- Inc. 5000 #5 — fifth-fastest-growing private company in America (2016)
- #1 fastest-growing company in Georgia — Atlanta Business Chronicle
- AT&T CTIA Wireless nomination (2010); Apple application commercial recognition
